MANUAL

# LIGHT TIMER

24 HOUR LIGHTING CONTROL

Lights not included

# **LIGHT TIMER**

## **24 HOUR LIGHTING CONTROL**

### **SETTING THE TIME**

Rotate the dial clockwise until the pointer points to the current time. Ensure that the switch on the side of the unit is set to (⌚) position

### **SETTING ON/OFF:**

15 minute intervals allow for 48 ON/OFF cycles per day. Begin with all segments pulled up. Push down the segment pins for required "ON" time. Each segment represents 15 minutes: 4 segments = 1 hour

### **CONNECTION**

Once the desired ON/OFF cycles and actual time are set, plug the timer into the outlet, and the light into the timer. Leave the light in the "ON" position

### **MANUAL ON/OFF**

To override the timer, slide the switch to the "ON" position. When switched to the "ON" position, the connected light is switched on permanently.

### **IN CASE OF POWER FAILURE**

Reset the timer as explained in "Setting the Time"

FOR INDOOR USE ONLY

DO NOT EXCEED RATED CAPACITY

125VAC 60HZ
